

Product information

Correct fit of the **EconoGuard** is important. **We recommend to wear a Brassiere or Vest under the EconoGuard.** To select the correct guard size, please refer to the sizing chart. Measure your chest size under the bust. Cup size should be the same as your standard brassiere. If you wear a heavy padded „sports type“ brassiere you may need the next larger cup size in the **EconoGuard**. We recommend the brassiere or vest to be of the synthetic textile type to allow moisture to move and evaporate. Evaporation is nature's own body cooling method.

Adjustment of straps. To aid protection the **EconoGuard** should be held as firmly in place as possible. If the back strap does not pull the guard firmly, please try the next smaller size or a thicker brassiere underneath.

The **plastic Guard** should be cleaned only with mild detergent and water under 30°C.

Storage Warning. Do not expose the guard to water hotter than 30°C, strong cleaning chemicals, solvents or direct sunlight. Otherwise, the guard could change shape under any of these conditions.

We advise a **constant inspection** of the elastic straps and metal hooks as well as adjuster slides to the signs of damage. Replace your guard in any case of doubts.
